DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by
Anderson et al. (US 5,859,497).

Anderson discloses a flat panel display with a faceplate (208) and backplate (202), an image production unit (206), a plurality of spacers (116) and a pair of alignment members (120).

Regarding claim 2, alignment members are connected to one-sided end portions of the spacers.

Regarding claim 3, the spacers are longitudinally placed.

Regarding claim 4, subsidiary alignment members (121) arranged perpendicular to the alignment members forming a rectangular frame (fig 2).

Regarding claim 5, (fig 9) each spacer has a plurality of exhaust grooves.

Regarding claims 6-9, the exhaust grooves are arranged in the longitudinal direction spaced apart from each other.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2879

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al. in view of Jaskie et al. (US 5,731,660).

Anderson discloses all of the above claim limitations but fails to clearly point out the alignment member having a plurality of grooves.

Jaskie discloses (fig 3) the alignment members having a plurality of grooves in order to provide a continuous fluid phase throughout all the separate compartments.

Hence it would have been obvious to one of ordinary skill in the art to use the flat panel of Anderson with the alignment members having a plurality of grooves in order to provide a continuous fluid phase throughout all the separate compartments, as taught by Jaskie.

Claims 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al. in view of Alwan (US 5,888,112).

Anderson discloses all of the above claim limitations but fails to clearly point out an insulating layer with a plurality of holes, a plurality of emitters, and a plurality of gate electrodes.

Alwan discloses (fig 1) an insulating layer with a plurality of holes, a plurality of emitters, and a plurality of gate electrodes in order to form a display image.

Hence it would have been obvious to one of ordinary skill in the art to use the flat panel of Anderson with the insulating layer with a plurality of holes, a plurality of

emitters, and a plurality of gate electrodes in order to form a display image, as taught by Alwan.
